

**Amendments to the Specification:**

*Please replace paragraph no. [0056] with the following paragraph. The amendments to paragraph no. [0056] are indicated by strikethrough and underlining.*

It will be understood that in addition to other embodiments, the software for displaying three-dimensional program information may also be provided as a software upgrade, such as software embodied in a storage medium of available through a signal-bearing medium, such as software downloadable from the Internet. Consequently, an embodiment of the present invention relates to a computer storage product with a computer-readable medium having computer code thereon for performing various computer-implemented operations. The media and computer code may be those specially designed and constructed for the purposes of the present invention, or they may be of the kind well known and available to those having skill in the computer software arts. Examples of computer-readable media include, but are not limited to: magnetic media such as hard disks, floppy disks, and magnetic tape; optical media such as CD-ROMs and holographic devices; magneto-optical media such as optical disks; and hardware devices that are specially configured to store and execute program code, such as application-specific integrated circuits ("ASICs"), programmable logic devices ("PLDs") and ROM and RAM devices. Examples of computer code include machine code, such as produced by a compiler, and files containing higher-level code that are executed by a computer using an interpreter. For example, an embodiment of the invention may be implemented using the Java JAVA programming language, C++, or other object-oriented programming language and development tools. Another embodiment of the invention may be implemented in hardwired circuitry in place of, or in combination with, machine-executable software instructions.
